

For rev 0.7, I worked on getting the sampler connected to my MIDI keyboard. This was accomplished with a simple if-else if loop. It is now mapped to the white keys of the keyboard, using the mapping 60 (for C4) to 74 (for D5). MIDI input can also be easily selected.

For the next revision of 0.9, I will add the Nektar Aruba controller and the ability to select different mappings. I will also add volume control. If there is time, I will also add sample banks.
